Allowable Subject Matter

1. **Claims 1-6** allowed.
2. The following is an examiner's statement of reasons for allowance:
3. **Claims 1, and 4-6** are allowed because the closest prior art, Billings (US Patent Application Publication 5,684,956) in view of Geyer et al., fails to anticipate or render obvious the concept transmission privilege acquisition for plurality of nodes on the same network without the exchange of token frames, by setting a node ID of a processing terminal, whenever the idle time unit is detected, a count is incremented for creating a node ID of information processing terminal, in combination with all other limitations in the claim (s) as defined by applicant.

Billings discloses a computer network that reduces the congestion on a LAN, allowing computer to request transmission, and removing information only read by PCs on a second communication path. Geyer et al. teaches the monitoring of the idle state, but does not set the node ID based on the monitoring of the idle state for transmission privilege acquisition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
